SAGE'S ANNOUNCEMENT

We went up Dec 10, 2006. We have definitely had a buzz and a lot of downloads and activity on the forums. The Ody community is small, and we are a virtually unadvertised niche of it, I think the only thing we have is a link on the old reg site and a newspost, which also went up on the 10th. We release the main server on the 1st, so I expect/hope to see a spike in a bunch of the categories. I hope even those lurkers I see on the forums as "Guest" sometimes will at least log ond and play, because absolutely the most thought and work has been put into at least making the GAME fun even if the rest of the graphics are a little rough around the edges or even not up to par with other Ody systems out there. Sage's Kingdom has been in development for over a year and has now weathered a registry and coder changeover from Steve to Me.

Sage's Kingdom Introduction

So, you've decided to step into a world created by a madman who's thought too hard and wasted too many hours, and still, you think you're going to figure out how to beat it? Well, good luck. To you and about the million others who have tried before you. Well, you might as well get started learning about this project if that's what you're here for... (if you're here for the complementary refreshments, they are on the tray in this closet, here, please step inside...)

Download the Client

(NEW!! 12/29) OdyFree Client w/ Sage's Kingdom

Install the Client

Once you've **downloaded the client**, make sure your computer is capable of running it. Windows 98 or higher is required, and Windows XP is recommended. **If you are using an operating system that is not Windows XP, click here** for some additional setup. Make a home for the client by **moving it to a folder of your choice**, and then double-click on the **odyfree.exe** file to SELL ME YOUR SOUL. After I've placed your soul in a shatter-proof jar, the client will begin to install. It

will download the requisite files from this very server (so, if you can see this page but can't download the files, something is wrong and you should post about it in the forums!) Upon completing the download, the **Registry** will launch with a bunch of custom servers that players have made from the OdyFree client. You can make your own server if you read the forums, it's complicated but it's fun. **Sage's Kingdom** is the Official server of the OdyFree Registry, so let's start by loading it now.
