

The Odyssey News!

Updated Rarely
Last Updated 8/31/06

We have Proud Registry Host/s, **DARKONE** and soon to be **MARCO**!! Everyone Cheer!! Yay!! Act happy!! ^ ^. If it weren't for them, or if they ever decide to go evil, we all would have a much more difficult time playing The Odyssey together ^-^ until Pengwy arranged for a new host. So let's all pretend to be nice and get on his/her/it/their good side/s yes? ;-)-- Now wait, what exactly is the registry? The Registry is that big comprehensive list of all the servers connected to it when you run odyssey.exe. If the Registry host bans you, you can't see the list but can still play on server's you know the IP of. Typically, bans should only be for people who are constantly hacking or people who just ruin the game for others. The Registry is a program that the Registry host needs to have running 24/7 on their computer or else we fire them and hire someone else. If that program is not running, we can't see the list of servers either. The Registry can do one more thing, and that is make a server official. So, if you have a very awesome server and the Registry host thinks so as well, your server will become Official! So like I said.. Get. on. good-side! ^_^

Now as well... Steverino AND DarkOne are supposedly fixing a few bugs in Odyssey, and adding new features!!! Yay!! *Cheers* Everyone give him around of applause and if you see them DON'T tell them to work or ask for a lot of things because they're too busy and will go RAWAR and bite your head off *points to decapitated person* Yes. It's happened before. This is because they are both coders for Odyssey, but like anyone else crumble under peer pressure. So let's not pressure them to do anything okay? **If you find a bug in Odyssey or would like to request an addition/change, you can always inform Tijer about it and he'll make sure it gets done if reasonable.**

DarkOne is currently the *new* Odyssey Coder. HOWEVER he has a lot of.. bad.. ideas. Like changing the colours to ones that are not comprehensible. If you have a complaint or a suggestion, **please talk to Tijer.**

Now when you are requesting a something new, or judging whether DarkOne did something reasonable or not, be sure to consider the Two True Major Rules of Updating::

Rule One: All old things are compatible (Even if it means you have to make a converter)

Rule Two: ONLY ADD. Do not subtract, do not change, only Add.

Top Five *Major* Topics Being Looked At:

1. Fluent Player/Monster walking
2. More Efficient Map switches
3. Reinstating lights
4. Improving weather/lighting
5. Fixing Edit Script Label

And That's it for Now!
